ABSTRACT

A variety of closures are provided for use with a drink cup or other container wherein the closures provide a compartment for receiving a digital media disk or other merchandise. Examples include various closures formed of inner and outer members connected by a hinge with the inner and outer members forming a compartment for closely receiving a digital media disk. Other examples include a closure having a single lid portion with a retaining mechanism for retaining a digital media disk to a top surface of the lid. The retaining mechanism includes, for example, elastic retaining bands or resilient tabs. In another example, the closure provides a curved compartment for receiving a booklet wherein a closure for the compartment includes snap-fit members for attaching the compartment closure to other portions of the container lid. Still other embodiments are provided for enclosing toys or the like including one embodiment wherein the closure is configured to retain both a compressible ball and a basketball. In use, after any beverage within the cup is consumed, the basketball is removed from the closure and mounted to a rim of the cup for providing a basketball hoop-like arrangement for use with the compressible ball. Numerous other embodiments are described.
